Syphilis Serology FINAL 17/10/17 12:06

The Toronto PHL reports:

Syphilisscreen:Non-Reactive

SyphilisSerologyInterpretation:

No evidence of current or past infection.

Note: Due to non reactive screening CLIA result, confirmatory testing will not be performed. If clinical suspicion of early syphilis, suggest single repeat serology in 2-4 weeks if not repeated already. Results should be interpreted in conjunction with clinical history, signs and symptoms.
