FINAL 21/11/19 06:48

Syphilis Serology
The Toronto PHL reports:

FINAL 21/11/19 06:48

Syphilis screen: Non-Reactive
Syphilis Serology Interpretation:

No serological evidence of current or past infection.
Note: No confirmatory testing is performed if syphilis screen result is non-reactive. If clinical suspicion of early syphilis, suggest single repeat serology in 4 weeks if not repeated already. Results should be interpreted in conjunction with clinical history, signs and symptoms.

HIV Antibody

HIV
HIV1/2 Ag/Ab Combo screen: Non-reactive.
HIV Final Interpretation: No HIV p24 antigen and no HIV1/HIV2 antibodies detected.

The Toronto PHL reports:

Please note: Persons in high risk groups who are nonreactive should be retested for up to three (3) months following possible exposure to HIV or on presentation of symptoms compatible with HIV infection.
